NIL Pension
AN INTEGRATED PLANNING PARTNERS SOLUTION

support@integratedplanningpartners.com · 773-318-9608

For student-athletes, parents, agents and advisors

Earn it in college. Collect it for life.

NIL Pension helps student-athletes turn two strong years of income into potential tax-free income for life.

Money you put in · NIL Pension income

Same money in a regular investment account: $58,577 a year after tax

Hypothetical example: $200,000 set aside by a 19-year-old over two years.

Money without a job tends to disappear. NIL Pension gives it one.

Six figures at 19.

Name, image and likeness deals and school revenue sharing can put six figures in a young athlete's hands. It feels like it will last. Taxes, big purchases and helping family make it easy to lose.

No pension later.

Go pro or not, every athletic career ends someday. And most careers after sports don't come with a pension.

How it works

Three stages. The athlete only acts in the first one.

In college

Set it aside

Put $100,000 in at 19 and $100,000 at 20. That is $200,000 of NIL or revenue-share income, and the last money the athlete puts in.

Through your career

Leave it alone

Nothing more to pay out of pocket. Seven yearly payments of $30,356 come from the $200,000 and the interest it earns, and a lender helps cover the rest. The plan builds value for decades.

When you need it

Get paid

In this example, income starts at 45: $123,507 a year for 56 years. The athlete chooses when to start, and in the illustration the income can be tax-free.

Same $200,000. Twice the paycheck.

A regular investment account in the same example pays about half.

Gross 6.84%

$123,507

a year, ages 45 to 100, potentially tax-free

NIL Pension · $6,916,365 total

Net 6.84%

$58,577

a year, ages 45 to 100, after tax

Regular investment account

$65,000
more every year

$3.6 million
more over a lifetime

And if the athlete goes pro? Then it is one more asset in the portfolio, built in college.

Who it's for

Athletes

Turn today's income into a future paycheck without waiting for a pro contract.

Parents

Help your athlete protect what they earn and keep it from fading.

Agents

Add a long-term plan to the deals you negotiate.

Financial advisors

Offer young clients a plan built for fast, short-lived income.

Common questions

Is the income guaranteed?

No. The numbers are a hypothetical illustration. Results depend on policy performance, loan interest rates and how the policy is managed.

What is it built on?

A permanent life insurance policy. A lender helps fund it, and income is taken as policy loans and withdrawals.

Is it right for everyone?

No. Taxes on NIL income should be covered and emergency cash in place first. A tax professional should review any plan.

What if the athlete goes pro?

Then it is one more asset. The plan does not depend on how long a playing career lasts.

Does the athlete need to be a star?

No. It only needs income to set aside. The example uses $100,000 a year for two years, and other amounts can be shown.

Two good years. A paycheck for life.

Built by someone who played the game.

Jeff Faine, CLU

Founder, Integrated Planning Partners

Former NFL offensive lineman · Notre Dame alumnus

On the offensive line, my job was to protect others and create opportunities for them. That is why I entered financial services, and it extends to the athletes we work with: the work they do on the court and the field should pay off long after their playing days have ended.

See what your two years could become.

Send a note and we will run the numbers for your situation.

Hypothetical illustration only. Not a guarantee or an offer. Assumes a 19-year-old sets aside $200,000 ($100,000 a year for two years) and an illustrated yearly growth rate of 6.84% before policy charges. NIL Pension is built on a permanent life insurance policy, with a lender helping to fund premiums. Income is taken as policy loans and withdrawals, which reduce the death benefit and can cause the policy to lapse if not managed. Loan interest rates can change. The regular-investment comparison assumes a 6.84% net return and a 15% capital gains tax rate on all distributions, a simplified assumption. Actual results will differ. Tax-free treatment depends on current law and how the policy is managed, and is not guaranteed. Talk with a tax professional before acting. Insurance is subject to underwriting and approval.
