NIL Pension

AN INTEGRATED PLANNING PARTNERS SOLUTION

For student-athletes

Two good years can become a paycheck for life.

You're earning real money at 19. Here is one way to make part of it keep paying you at 45, at 60 and at 80.

Money you put in NIL Pension income

Same money in a regular investment account: $58,577 a year after tax

Hypothetical example: $200,000 set aside over two years, income from age 45 to 100.

The fix is to give some of your money a job that starts when you are older.

It feels like a lot. It is easier to lose than you think.

$200,000 at 19 feels like it will last. Money without a job tends to disappear: taxes, a car, helping family, a deal that falls through. Careful people watch it shrink too.

Every athletic career ends someday.

Go pro or not, the playing days end. And most careers after sports don't come with a pension.

This is a way to build your own, using money you are earning right now.

How it works

Three stages. You only act in the first one.

In college
Set it aside

You set aside $100,000 at 19 and $100,000 at 20. That is $200,000 of your NIL or revenue-share income, and it is the last money you put in.

Through your career
Leave it alone

You have nothing more to pay out of pocket. Seven yearly payments of $30,356 come from your $200,000 and the interest it earns, and a lender helps cover the rest. The plan builds value while you build your career.

When you need it
Get paid

In this example, you start collecting at 45: $123,507 a year for 56 years. You choose when to start, and in the illustration that income can be tax-free.

What you could collect

Put the same $200,000 in a regular investment account and take income over the same ages, and the paycheck is about half.

Gross 6.84%

$123,507

a year, ages 45 to 100, potentially tax-free

NIL Pension · $6,916,365 total

Net 6.84%

$58,577

a year, ages 45 to 100, after tax

Regular investment account

$65,000
more every year

$3.6 million
more over your lifetime

And if you do go pro? Then this is one more asset, built while you were still in college. It does not depend on how long your playing career lasts.

Know this before you decide

NIL Pension is built on a life insurance policy designed to build cash value and pay income.

These numbers are a hypothetical example.

Talk it over with someone you trust and a tax professional first.

Questions worth asking now

If your playing days ended next year, what would pay your bills at 30? At 45?

What will $200,000 look like in two years if it has no job?

If next year's deals are half of this year's, will you wish you had set some aside?

Who is responsible for your money plan after your eligibility runs out?

Hypothetical illustration only. Not a guarantee or an offer. Assumes a 19-year-old sets aside $200,000 ($100,000 a year for two years) and an illustrated yearly growth rate of 6.84% before policy charges. NIL Pension is built on a permanent life insurance policy, with a lender helping to fund premiums. Income is taken as policy loans and withdrawals, which reduce the death benefit and can cause the policy to lapse if not managed. Loan interest rates can change. The regular-investment comparison assumes a 6.84% net return and a 15% capital gains tax rate on all distributions, a simplified assumption. Actual results will differ. Tax-free treatment depends on current law and how the policy is managed, and is not guaranteed. Talk with a tax professional before acting. Insurance is subject to underwriting and approval.
